Data Used

For the purpose of opening the Chinese restaurant, we need to gather following data:

- The neighborhood of Toronto, we have earlier used this in our assignments.
- Geographical info about the different neighborhoods.
- Information about restaurants, cafes of all cuisine especially Asian, because they are going to be the ones to compete.

Following sources will be used to extract the data:

- Wikipedia
- Geocoder package
- Foursquare API to get the details of neighborhood so that proper clustering can be done.
